

# Science, meet World

Lessons from applying gesture recognition to sign language alphabets

Anna Borysova   Shaheel Kooverjee   Erin Versfeld

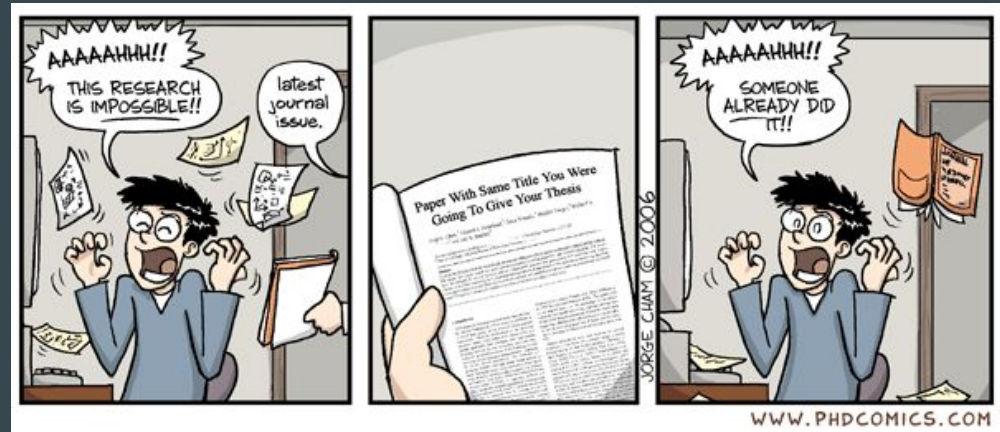

Supervisors: Assoc. Profs. James Gain & Deshendran Moodley

Second Reader: Prof. Edwin Blake

Background

- Research questions, aims
- Gesture recognition and machine learning
- Why sign languages?
  - Why the alphabet?
- Devices

**Data gathering!**

**Machine learning!**

# Results\*

\*Just the best per device, read our papers for details

# Research question

## Myo

Extra Trees  
8.05 %

Best in literature:  
Artificial Neural Network  
100%

## Leap

Support Vector Machines,  
52.0 %

Best in literature:  
Artificial Neural Networks,  
99.1%

## Kinect

Support Vector Machines,  
75.9 %

Best in literature:  
Artificial Neural Networks,  
100%

**Lessons learnt**

- EMGs are inherently difficult
- Naturalistic settings make ML extremely difficult
