

23 June 2017

*Time:*

11 am

*Duration:*

5 hours

*Present:*

- Anna Borysova
- Shaheel Kooverjee
- Erin Versfeld

*Excused:*

None. This was a data gathering pilot therefore J and D were not expected to attend.

*Summary*

- The batch script has been finalised.

*Next meeting:*

28 June 2017, time to be decided

*Points of Action for next meeting:*

- None. Exams this week mean that no progress can be made prior to the next meeting. However, all work to be done will be covered then.

*Findings:*

- The batch script has a race condition which was causing issues with the Leap's data gathering. This was not resolved but its effect has been neutralised by reordering the execution of the programs and use of timeouts.
- It was discovered that arm rests or additional time would be required to support the participants' arms when performing these gestures, as arm cramps were discovered after only a few gestures were performed.
- Logic was added to automate the recording of the order in which gestures will be performed. This same logic is responsible for randomising the order in which gestures are requested to be performed.
